TO WHOM IT MAY CONCERN

Ant Yapi Sanayi ve Ticaret AS was our general contractor for the design and build construction of White Gardens Office Center in downtown Moscow, Russian Federation from 2012 – 2014.

The first phase of the Project consisted of the R/C structural frame of five underground levels (~34 000 m²) which were constructed following a semi-top-down construction methodology as well as the preparation of full scope working documentation for the project as well as minor revisions in P-Stage design and re-approval by State Authorities.

The five storey basement structure that was constructed adjacent to existing structures all around the perimeter in a very tight land plot has been a unique experience since as of today it is still the largest number of underground floor levels built with a semi-top-down approach in Moscow.

The second phase of the Project consisted of the R/C structural frame of the above ground levels (66 000 m²) as well as the execution of all façade, roof, finishing and MEP works and lift installation for the shell and core completion of the 100 000 m² state-of-the-art, A-class office complex.

The facility has been among the pioneers of Breeam certificated office centers in Moscow.

Ant Yapi has completed the Project in good quality and on-time and has proven itself as a reliable partner with a pool of strong resources for the construction of complicated, design and build construction projects.
